Saturday, July 24, 2010

8:00am till 4:00pm

Target Audience

Priority will be given to MA Firefighters, Animal Control Officers, farmers and other DART personnel. All others will be placed on the wait-list for the class and will be enrolled as space permits. You will receive a confirmation email if your enrollment is approved.

Description

The training is designed to give rescue personnel a basic knowledge of horse and livestock behavior and large animal rescue techniques. There are two components of this training. The first part of the classroom sessions will give the basics of horse and livestock behavior and an insight into body language of the different species. The second part of the classroom will show in detail the theory and proper use of the rescue equipment listed in the outline.

The practical aspect of the training is to be able to put the basics taught in the classroom to work in a controlled environment. We will demonstrate the proper handling techniques and the participants will have an opportunity for hands-on with the animals. The practical with the rescue equipment will involve the use of our training mannequin "Lucky the horse". Using Lucky gives us the ability to give every attendee the chance for hands on with the rescue equipment. We are able to reenact different rescue scenarios using our rescue equipment and the equipment found on fire department rescue vehicles.

This training will lay the basics down for large animal rescue and familiarize the participants with the rescue equipment that is available to them and the equipment that they may already have that can be used in these rescues. This is the first step in preparing responders to handle large animal rescue.

Registration Process:

Roger Lauze, Coordinator of Equine Rescue and Training

Roger holds a Bachelor of Science in Biology from Framingham State College. He brought his horse and farm animal handling skills to the MSPCA 28 years ago. In 1994, Roger played a role in developing the original Rescue Glide (FEI inspected and approved equipment designed to move downed horse/large animals), which launched the current Equine Ambulance Program based out of the MSPCA at Nevins Farm in Methuen, MA. Roger has attended numerous workshops on large animal rescue and is an AHA Disaster Designee. In his role of Coordinator of Rescue and Training for the MSPCA Equine Ambulance Program, Roger responds to horse emergencies throughout New England (through an on-call system for veterinarians), trains groups on handling equine emergencies and travels nationally to provide ambulance service for Sport Horse events. Roger and the MSPCA ambulance staff also help groups across the country start their own equine ambulances, using equipment designed and used by the MSPCA. Roger has helped the program reach its goal of teaching groups throughout the country in emergency rescue techniques to help horses in need. In the past ten years, the MSPCA Equine Ambulance Program has helped over 150 horses, assisted in launching nearly 30 additional ambulances and trained an estimated 6,000 animal professionals in emergency equine rescue techniques and transport for over 14 years. The MSPCA Rescue Glide is used at the University of Pennsylvania's New Bolton Center, University of Ontario at Guelph, University of Minnesota, Virginia Tech and Tufts University Hospital for Large Animals, to name a few. Among those trained include the New York City Mounted Police Unit, Aiken South Carolina Safety and Rescue Group, as well as numerous local Fire and Rescue Groups, Veterinarians and Veterinary Technicians. Locally, Roger's demonstrations and talks have been seen at Tufts Animal Expo, Rochester Equine Clinic and Equine Affaire.
